The Future of Remote Equipment Monitoring

MDTCloud data acquisition gives you the power to easily monitor your oilfield equipment from any location, using any web-enabled device. It's the quickest, most convenient way to troubleshoot operational issues, share performance data with your customers and access historical data to review previous jobs.

For a variety of oilfield applications, MDTCloud data acquisition provides:

- Greater equipment reliability
- A more intuitive approach to preventative maintenance
- Less downtime

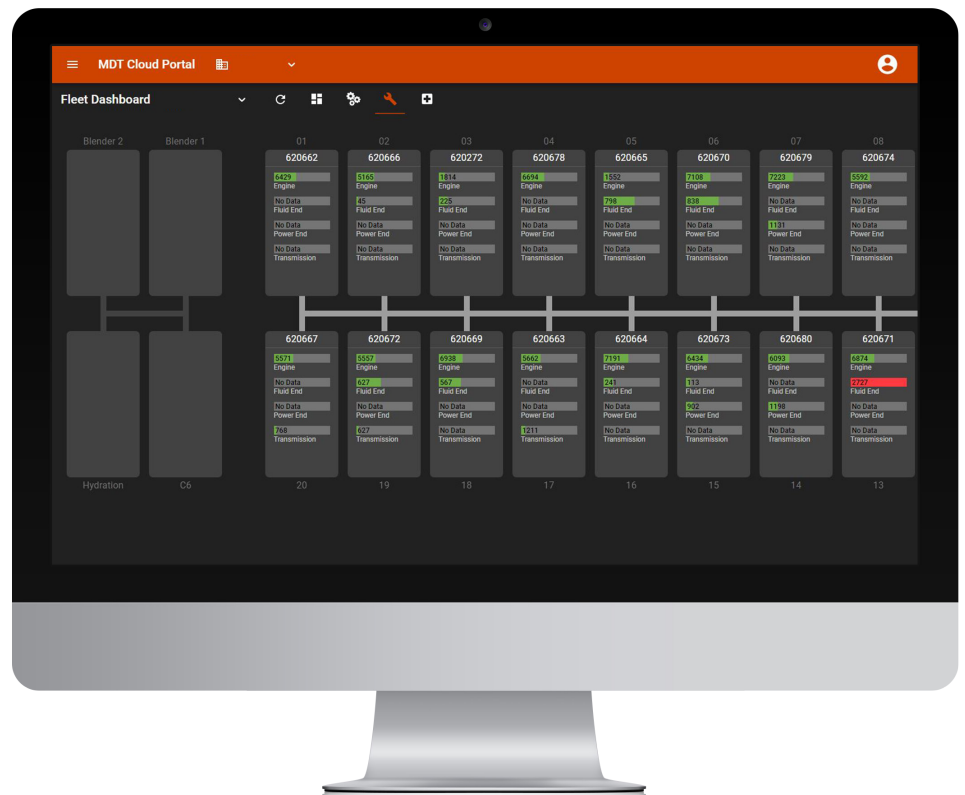

MDTCloud interfaces give you easy access to fleet statistics, equipment runtime, component metrics and more. (Fracturing fleet/equipment application shown here.)

MDTCloud

KEY FEATURES

- View performance data in real time (with cell connection)
- Access engine transmission data from MDTCloud interface
- Download process and engine data
- Quickly view equipment hours
 - Schedule and monitor maintenance cycles from Maintenance Dashboard
- Receive alerts via visible alarms and badges on Fleet Health Dashboard

With detailed, accurate equipment information at your fingertips, you can easily improve operational efficiency and performance.
